AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

- 1. (Original) A method for increasing the flexibility of cartilage in an animal in need of such increase which comprises administering to said animal a cartilage flexibility enhancing effective amount of at least one of glycine and proline.
- 2. (Original) The method in accordance with claim 1 wherein the animal has a condition or needs prevention of a condition selected from the group consisting of osteoarthritis, rheumatoid arthritis, osteochondorosis, degenerative joint disease, synovitis, bacterial purulent arthritis, osteoarthropathia and psoriatica.
- 3. (Original) The method in accordance with claim 1 wherein a cartilage flexibility enhancing amount of glycine is employed.
- 4. (Original) The method in accordance with claim 3 wherein a minimum of at least about 1.25 wt% of glycine is employed based on dry matter basis of diet.
- 5. (Original) The method in accordance with claim 1 wherein a cartilage flexibility enhancing amount of proline is employed.
- 6. (Original) The method in accordance with claim 5 wherein a minimum of at least about 1.45 wt% of proline is employed based on dry matter basis of diet.
- 7. (Original) The method in accordance with claim 1 wherein a cartilage flexibility amount of glycine and proline is employed.
 - 8. (Original) The method in accordance with claim 7 wherein the animal is a dog or cat.

- 9. (Original) A method for increasing the strength of a cartilage in an animal in need of such increase which comprise administering to said animal a cartilage strength enhancing effective amount of at least one of glycine and proline.
- 10. (Original) The method in accordance with claim 9 wherein the animal has a condition or needs prevention of a condition selected from the group consisting of osteoarthritis, rheumatoid arthritis, osteochondorosis, degenerative joint disease, synovitis, bacterial purulent arthritis, osteoarthropathia and psoriatica.
- 11. (Original) The method in accordance with claim 9 wherein a cartilage strength enhancing amount of glycine is employed.
- 12. (Original) The method in accordance with claim 11 wherein a minimum of at least about 1.25 wt% of glycine is employed based on dry matter basis of diet.
- 13. (Original) The method in accordance with claim 9 wherein a cartilage strength enhancing amount of proline is employed.
- 14. (Original) The method in accordance with claim 13 wherein a minimum of at least about 1.45 wt% of proline is employed based on dry matter basis of diet.
- 15. (Original) The method in accordance with claim 9 wherein a cartilage strength enhancing amount of glycine and proline is employed.
- 16. (Original) The method in accordance with claim 15 wherein the animal is a dog or cat.
- 17. (Original) A method for preventing degradation of cartilage tissue in an animal in need of said prevention which comprises administering to said animal a cartilage degradation effective amount of at least one of glycine and proline.

Serial No. 10/774,951 Page 3 of 6

- 18. (Original) The method in accordance with claim 17 wherein the animal has a condition or needs prevention of a condition selected from the group consisting of osteoarthritis, rheumatoid arthritis, osteochondorosis, degenerative joint disease, synovitis, bacterial purulent arthritis, osteoarthropathia and psoriatica.
- 19. (Original) The method in accordance with claim 17 wherein a cartilage degradation prevention enhancing amount of glycine is employed.
- 20. (Original) The method in accordance with claim 19 wherein a minimum of at least about 1.25 wt% of glycine is employed based on dry matter basis of diet.
- 21. (Original) The method in accordance with claim 17 wherein a cartilage degradation prevention enhancing amount of proline is employed.
- 22. (Original) The method in accordance with claim 21 wherein a minimum of at least about 1.45 wt% of proline is employed based on dry matter basis of diet.
- 23. (Original) The method in accordance with claim 17 wherein a cartilage degradation preventing amount of glycine and proline is employed.
- 24. (Original) The method in accordance with claim 23 wherein the animal is a dog or cat.
- 25. (Original) A composition suitable for systemic administration to an animal comprising a cartilage flexibility or cartilage strength enhancing effective amount of at least one of glycine and proline in association with a carrier.
- 26. (Original) The composition in accordance with claim 25 wherein the systemic administration is oral.
- 27. (Original) The composition in accordance with claim 25 wherein the carrier is a dosage unit form, a food or a liquid.

Serial No. 10/774,951 Page 4 of 6

- 28. (Original) The composition in accordance with claim 27 wherein the carrier is a food.
- 29. (Original) The composition in accordance with claim 26 wherein an effective amount of glycine is present.
- 30. (Currently Amended) The composition in accordance with claim 29 wherein at least 1.25 wt% of glycine is present based on dry matter basis of diet.
- 31. (Original) The composition in accordance with claim 26 wherein an effective amount of proline is present.
- 32. (Currently Amended) The composition in accordance with claim 31 wherein at least 1.45 wt% of glycine proline is present based on dry matter basis of diet.
- 33. (Original) The composition in accordance with claim 26 wherein a combination glycine and proline are employed in at least minimum quantities.
